

# Could your business survive a disaster ?

Safeguard the data that is critical to your business !

## Secure Backup

Most people don't realise how much they rely upon the information on their computer until it's gone. If all that information was lost would your business survive?

Would you still have the details of your sales contacts? Would you be able to continue working on your current projects? Would you even know which customers had paid their invoices? Having a secure copy of all your business data isn't just a good idea - it's vital to the survival of your business.

**"40% of companies that experience a disaster go out of business within 5 years!"** Gartner Research, September 2001

Secure Backup is a service that ensures your information is secure. It combines both a business class software package and space on our storage servers. The software controls your backup : what information is backed up, time of day and frequency of your backups. The storage servers provide the secure space for your information. Our servers are located in a world class computer data centre equipped with fire prevention systems, air conditioners, generators, and physical security.

Whether you are a road warrior carrying your notebook on your travels, or you are office based, your information is always at risk. Theft, fire, hardware failure and even computer viruses can cause disaster for your work.

From less than a dollar per day what have you got to lose - except your business.

### Secure

Privacy is vital these days and there is nothing more important than the security of your business information. To protect your data it is encrypted before it leaves your computer so nobody else can ever read it.

### Automatic

You can schedule our software to backup your data during the night when you aren't using your Internet connection. The process is totally automatic so you can be sure you always have a current backup. No more disks. No more tapes. No more manual tasks. No more worries.

### Off Site

Your backup is stored on our servers which are located in a top class computer data centre. Even if your office catches on fire your data is safe. Off-site backup has long been recognised by big business as the safe way of protecting important data. Our Secure Backup product gives you big business protection at small business prices.

### Fast

Only the changes you make each day are sent over your Internet connection. The information is compressed before transmission to ensure that your backup takes the least amount of time possible.

### Flexible

Multiple versions of your files are kept on our backup servers so you can easily retrieve an older version of a file if you ever need to.

### Inexpensive

With backup plans starting at \$29.95 per month you can have total peace of mind for under \$1 per day.
